

**FACT SHEET ADDENDUM FOR PROPOSED  
MODIFICATION OF DRAPER VALLEY FARMS  
STATE WASTE DISCHARGE PERMIT NUMBER ST-3861**

Fact Sheet Addendum  
June 20, 2006

Draper Valley Farms requested, in a letter of February 24, 2006, that state waste discharge permit for discharge to a POTW Number ST-3861, be modified to authorize an increase in the permit limitations for Flow, BOD<sub>5</sub> (Five-Day Biochemical Oxygen Demand), and TSS (Total Suspended Solids) by ten percent for each of the limitations respectively. The existing and proposed permit limitations are shown in the table below:

<b>Existing and Proposed Permit Limitations for Draper Valley Farms Permit Number ST-3861</b>		
<b>Pollutant Parameter</b>	<b>Limitations in Existing Permit</b>	<b>Limitations Proposed for Inclusion in the Modified Permit</b>
Flow (gpd) Consecutive 3-day Average	630,000	760,000
BOD <sub>5</sub> (pounds per day) Consecutive 3-day Average	1,300	1,430
TSS (pounds per day) Consecutive 3-day Average	750	825
FOG (mg/L) Daily Maximum (no change proposed)	100	100

The City of Mount Vernon's letter of December 1, 2005, contained a notification by the City of Mount Vernon, that the City of Mount Vernon POTW has the *"ability to adequately transport and treat the added flow and/or wasteload proposed by Draper Valley Farms."*

As the proposed permit modification consists of an increase in the magnitude of the limitations, issuance of a public notice of draft is required under state regulations.
